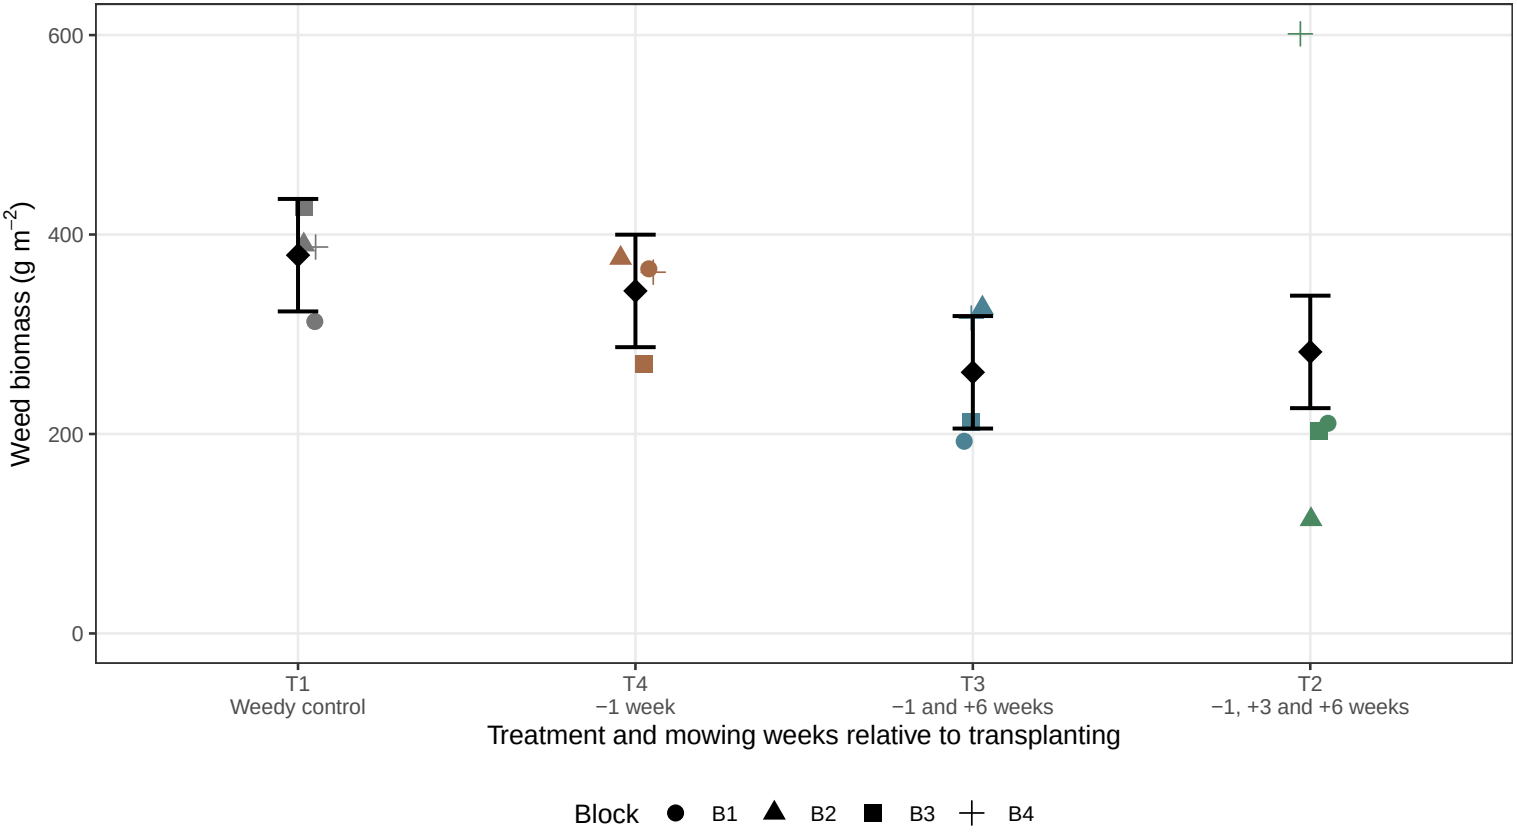
Weed biomass: Cover crop sampling area

Treatment ANOVA: F(3, 9) = 0.93; p = 0.467



All samples cut at 8 cm. T1: no broccoli or cover crop planted; four quadrats per plot.
T2−T4: two quadrats per plot.
Points: plots; diamonds: adjusted means; bars: +/− 1 model−based SE.
Weeds include legacy clover; unclassified vegetation is excluded.
